

MAY IS

NEUROFIBROMATOSIS AWARENESS MONTH

SOCIAL MEDIA MESSAGES TO SHARE

- 1** This Neurofibromatosis Awareness Month, we're raising our voices for all Australians impacted by NF – including those living with Neurofibromatosis Type 1 and all forms of Schwannomatosis, including NF2.
#NFAwarenessmonth #CareShouldn'tBeComplex @ctfaustralia
- 2** Complex conditions like neurofibromatosis need simplified care. We're advocating to simplify the path to diagnosis, treatment, and multi-disciplinary care. Together, we can move towards systems that are integrated, easier to access and centered around the people who need them most.
#NFAwarenessmonth #CareShouldn'tBeComplex @ctfaustralia
- 3** Neurofibromatosis impacts multiple body systems, is highly variable, unpredictable and managed by frequent visits to multiple specialists. Despite being one of the most common and complex genetic conditions, up to 90% of kids and adults with NF cannot access coordinated, specialist care.

We're working to reduce the financial, emotional and cognitive load on families and lead to better health outcomes.
